Welcome to ROTHENBERGER!

ROTHENBERGER was founded in 1949 as a trading company for tools, machines, and welding technology. As early as 1967, ROTHENBERGER developed its first system solution: the R-System. It consisted of tools for expanding, extracting, and bending pipes—revolutionary equipment that enabled installers to connect pipes without fittings. This allowed plumbers to install drinking water and heating systems far more efficiently.

Today, ROTHENBERGER supports installers and air-conditioning and refrigeration (ACR) technicians worldwide with products that have been co-developed, tested, and refined by professional users.

Focus on users

At ROTHENBERGER, we focus on professionals in the sanitary, air-conditioning, and refrigeration sectors. Day after day, they face challenges on construction sites and in service operations. They need tools they can rely on. That's why ROTHENBERGER manufactures tools and machines that are easy to use. Our products stand for premium quality and are driven by innovation. Customers all over the world value the reliability, durability, and technical excellence of ROTHENBERGER pipe tools. Your demands are our motivation—to get the job done. Every single day. Safely, quickly, and reliably.

Quality from the start

For more than 75 years, ROTHENBERGER has focused on customer satisfaction and success—from product development to production, quality control, and service. We develop high-quality, high-performance, and technically advanced pipe tools and machines.

Every development process begins with the specific needs of our users. We listen carefully, analyze the requirements, and use our experience to create innovative solutions.

ROTHENBERGER's production facilities utilize state-of-the-art technologies and processes to develop tools and machines, while maintaining a high level of in-house production—by professionals, for professionals!

Sustainability means responsibility

In times of climate change and energy crisis, environmental protection is a key responsibility for our society. ROTHENBERGER is taking action and is committed to becoming climate-neutral. Since 2020, we have been operating photovoltaic systems with monocrystalline solar cells on the roofs of all buildings at our site in Kelkheim (Taunus), Germany.

Sustainability is a core concern for ROTHENBERGER. That's why we focus on durable products, system solutions, and cross-manufacturer-compatible batteries. This approach conserves materials, reduces costs, and protects valuable resources. Another great example is our ROCASE case system, which enables safe tool storage and reduces packaging waste.

"Sustained by"

Every used tool whose product life cycle has been extended through repair or upgrade and is resold receives the "Sustained by" sticker.

This indicates that you have made a contribution to sustainability with your purchase and that a fixed portion of the sales profit has been donated to a climate protection project.

CAS—Cordless Alliance System

ROTHENBERGER, as one of the founding members, has been offering a comprehensive range of CAS cordless tools since 2018. The range extends from sanitary installations to air-conditioning and refrigeration technology, and into the service area. The proven battery and charging technology is developed by Metabo and is fully compatible with CAS products from other manufacturers.

AMPShare—Powered by Bosch

ROTHENBERGER has been a founding member of the AMPShare battery platform since 2022. It is based on 18 V battery technology from Bosch. The batteries and chargers of this alliance are fully compatible with all AMPShare tools and machines from alliance partners, as well as with 18 V battery-powered tools from Bosch Professional. In the future, all ROTHENBERGER battery tools will be offered with an AMPShare interface.

ROMAX NANO: Small, slim, smart—the world's lightest 32 kN press machine!

The ROMAX NANO from ROTHENBERGER is the world's smallest and lightest 32 kN press machine for fittings made of metal, plastic and multilayer composite systems up to 110 mm.

The eDirectDrive and the 2-in-1 press jaw holder make it possible to use the particularly compact NANO iJAWS and standard jaws from the ROTHENBERGER R-System. Automatic force adjustment, app connectivity and CAS battery technology ensure safety and easy documentation.

Product details on page 136

NANO iJAW TECHNOLOGY

The NANO iJAW technology combines particularly compact and lightweight press jaws with intelligent functions.

Thanks to an integrated RFID chip, the NANO iJAWS communicate with the ROMAX NANO in real time. The automatic and optimised press force adjustment and the storage of the life cycle data of the press jaws increase the safety and efficiency of every pressing operation.

In addition, connectivity to the ROTHENBERGER app facilitates documentation and supports error-free tool availability by providing information on maintenance intervals.

ROCUT 26 MSR: Light, precise, safe— for best manual cutting

The ROCUT 26 MSR has been specially developed for multilayer composite pipes with an aluminium core and is suitable for pipes up to 26 mm in diameter.

The curved, ground steel blade enables precise, right-angled cuts with minimal deformation of the pipe. Thanks to the special blade, the cutting force required by the user remains low. A wide support prevents the pipe from tipping away and the rubberised handle ensures a secure grip. The transport lock holds the shears in place after use.

Insert extractor hook into the drilled hole and screw the bell firmly against the drill hole

Using the ratchet, turn the extractor to the left, while paying attention that the V-block is seated securely

After extraction, set correct insertion depth (dependant on pipe Ø) with cam pincer

Simply calibrate the tee Ø on the UNIDRILL Automatic and the drilled hole Ø will automatically correspond to the extractor hook required.

Extractor ratchet

Constant Force Technology

The CFT guarantees a constant axial pressing force over the entire service interval. A very important requirement for the production of sealed press connections.

CFT guarantees:

- ROMAX NANO: several pressing force levels (iJAW and 32 kN) / no limitation of pressing cycles / 2 years
- ROMAX Compact III: 19 kN / 40,000 press cycles / 2 years
- ROMAX Compact TT: 19 kN / 40,000 press cycles / 2 years
- ROMAX 4000: 32 kN / 40,000 press cycles / 2 years
- ROMAX 3000 AC: 32 kN / 20,000 press cycles / 2 years
- ROMAX AC ECO: 32 kN / 10,000 press cycles / 2 years

No system commitment

Users are free to decide which fitting systems they want to press. They are also free to choose the manufacturer of the press machines and press tools. There is no legal provision, DIN standard or other provision—for example, a regulation established by means of a DVGW worksheet—which obligates the tradesmen to exclusively use the press tools or press jaws of just one fitting or piping system manufacturer.

The only decisive factor is whether the fitting system and pressing tool are suitable for one another – only in this case is the tightness guaranteed. The Pressnavigator app provides guidance by enabling users to find the suitable press tool for the fitting system, or the suitable fitting system for the press tool.

Controlled press cycle

After reaching a predetermined pressing force the press cycle switches off automatically. The piston retracts after the necessary pressing force has been reached. This guarantees uniform and reliable pressings as leading system manufacturers require.

Electronic control

The electronics of the ROMAX NANO, ROMAX Compact III, ROMAX Compact TT, ROMAX 4000, ROMAX 3000 AC provide for a safe pressing cycle:

- Control of the battery charge status
- Safety start-inhibitor when the battery is too low
- LED display of the service interval and any error messages

Press jaw sets >B< MaxiPro

An innovative press system suitable for air-conditioning and refrigeration applications consisting of Conex Bänninger® >B< MaxiPro® fittings, suitable press jaws and press machines from ROTHENBERGER.

Tight connections up to 48 bar

- The O-ring is resistant against several oils including ester oil.
- The 3-point press, one on each side of the bead and one press compressing the O-ring, provides a permanent and secure joint.

The advantages

- Only 3 seconds per joint completion
- Saves approx. 3 minutes per connection
- Flame-free joint, no hot work permit needed
- No need for nitrogen purge

Made-to-last through laser hardening

The press jaws are partially laser-hardened. This makes them particularly durable in those places that take the most pressure. Laser hardening increases the jaws' durability considerably.

3-point press technology

Three press points: one on each side of the bead and one compressing the O-ring for a permanent and secure joint

How to install the Conex Bänninger® >B< MaxiPro® system?

Conex Bänninger® >B< MaxiPro® benefits from a 3-point radial press—three press points, one on each side of the bead and one press compressing the O-ring. This provides a permanent and secure joint. As the connection is a mechanical joint, there is no need for nitrogen purge during the joining process.

1. Cut the tube to length.

2. Deburr and remove all external sharp edges.

3. Use a pencil deburrer on internal edges.

4. Clean the tube end with a circular movement, avoiding grooves that run parallel to the tube.

5. Check for defects.

6. Ensure the O-ring is seated.

7. Mark insertion depth using depth gauge and insert tube fully into the fitting.

8. Align jaws squarely on the fitting and complete the joint.

9. Mark the completed joint.

Please note: To ensure a safe and tight connection please follow the detailed Conex Bänninger® >B< MaxiPro® installation process. For more information, please visit the Conex Bänninger® website: conexbanninger.com

Butt welding workshop machines

Scope of application:

The ROTHENBERGER butt welding workshop machines can be used to process pipes made of PE, PP and PVDF into T-pieces, bends, angles or Y-pieces. They are available with both manual control and CNC control. In addition to logging the welding parameters, the CNC control also enables consistent, continuously good quality of the welds.

Application benefits:

Due to the torsionally rigid design, the welding forces are transmitted safely. The precise control of the welding forces as well as the electronic adjustment of the heating element temperature enable welding according to DVS 2207 or other international standards and guidelines. The compact design of the machines require a minimum space requirement with maximum possibilities for the production of molded parts.

ROWELD type Premium CNC

Hydraulic butt-welding machine Ø 90–630 mm

The PREMIUM hydraulic system guides the user step by step through the welding process and automatically logs all welding parameters. Welding can be performed according to DVS 2207 as well as other international standards and guidelines. The data transfer is carried out via USB interface.

Instructions for safe and proper use of the refrigerants

Refrigerant

- Wear protective gloves and safety goggles
- Do not let refrigerant come in contact with skin
- Do not inhale high concentrations of vapours (Lack of oxygen causes a narcotic effect and is a danger to life)
- Do not smoke around refrigerant
- Working place / room must be thoroughly aired, if necessary extracted

Refrigerant bottles

- Secure against accidents, do not throw
- Do not expose to direct sunlight and do not place near radiators or other heat sources
- Do not use open flame
- Do not disassemble or remove valves
- Damaged bottles need to be properly returned
- Close empty containers

Air-conditioners

- Air-conditioner leaks need to be repaired immediately
- Do not allow refrigerant to leak while filling or doing maintenance work
- In high concentrations (for example pipe burst), leave the room and do not enter again until it has been properly ventilated
- Only do brazing work together with protective nitrogen gas and only in well ventilated areas
